La Situación

Introduction – A changing scenario

- On-line booking and on-line check-in
- Increased access to air transportation
- Many passengers with medical conditions would present directly at the airport without being pre-approved by the airlines

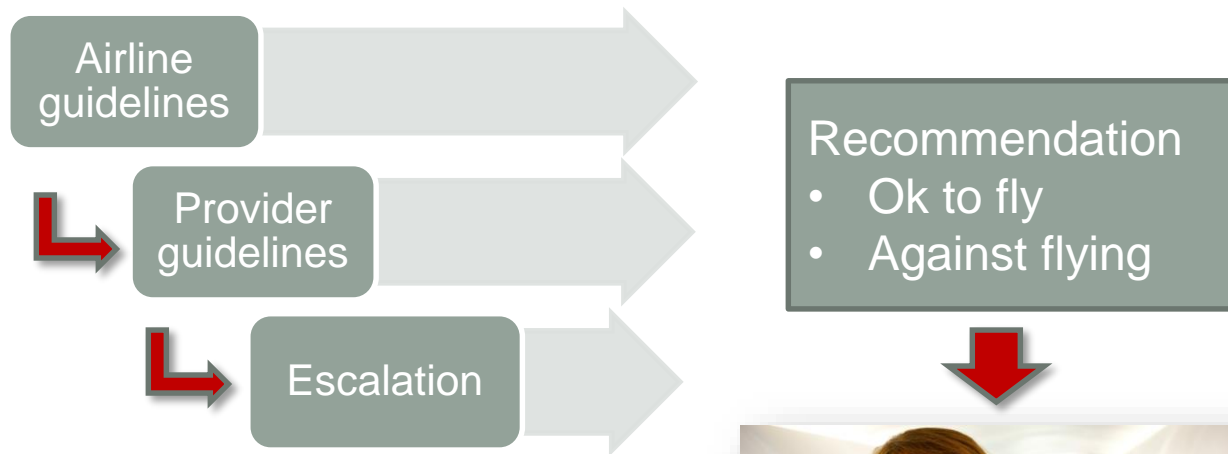

Opportunities for Intervention

- Pre-boarding
- Post-boarding

Destination

Pax FTF process

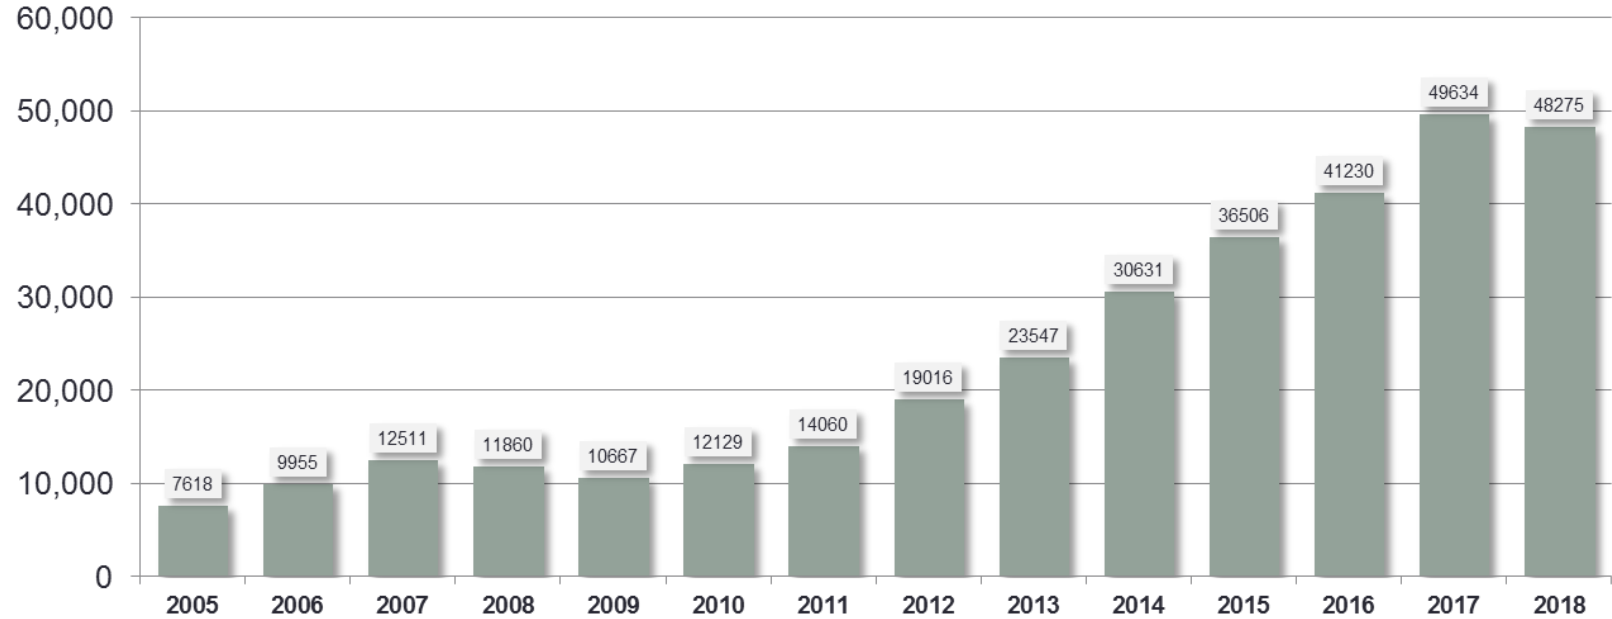

The “index” Ebola case in Nigeria

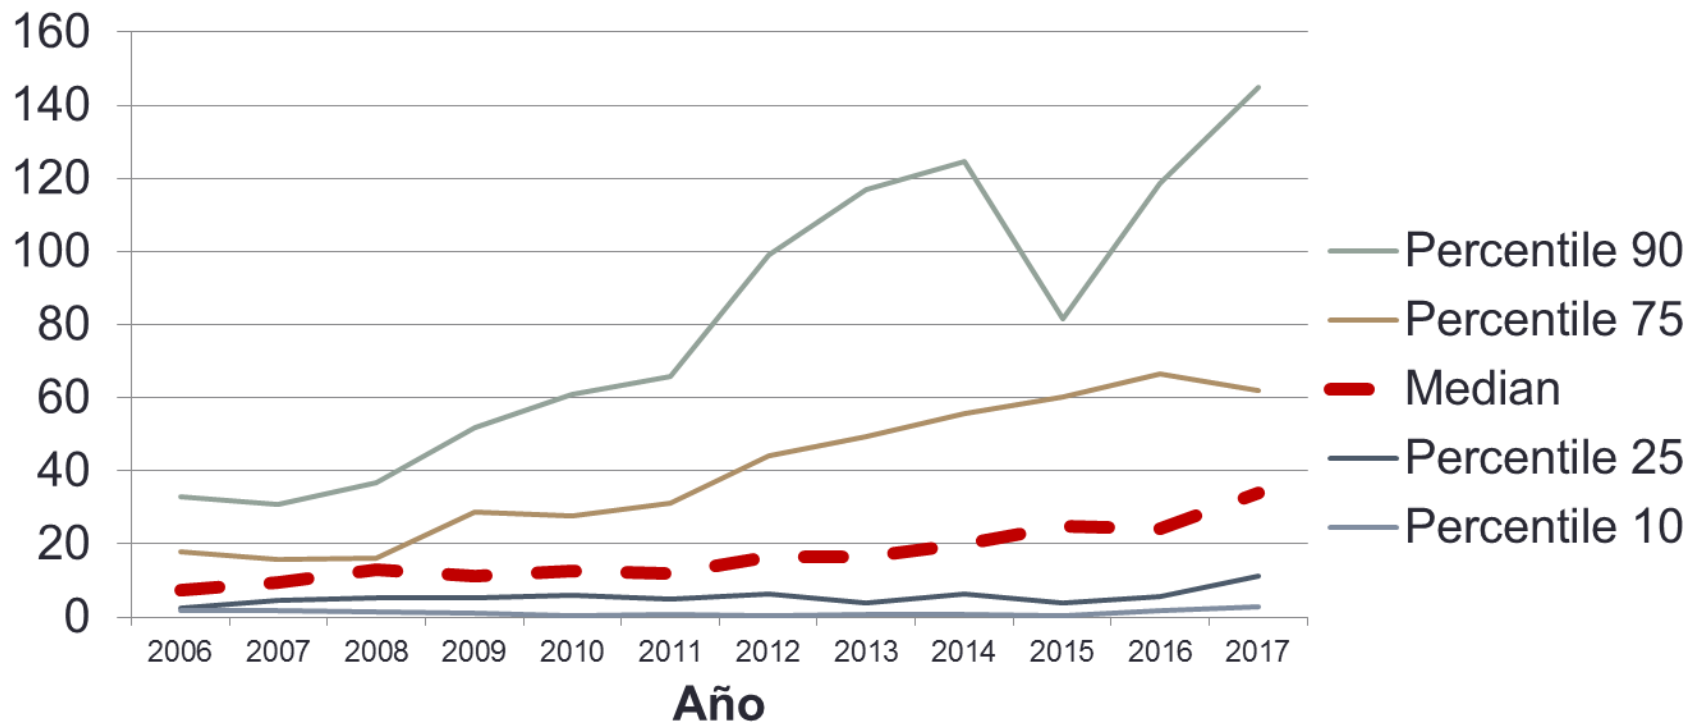

Would you allow that person to fly?

- The Ebola virus entered Lagos on 20 July via an infected Liberian air traveler, who died 5 days later.
- ***At the departure airport, he was visibly very ill, lying on the floor of the waiting room while awaiting the flight.***
- At the hospital, he told staff that he had malaria and denied any contact with an Ebola patient.
- As was learned later, his sister was a confirmed case who had died from the disease in Liberia.

- International Federation for the Surgery of Obesity and Metabolic Disorders (IFSO)

DR. MOHAMMAD KHAIRIS

5 Reasons to Fly to Jordan for Gastric Sleeve Surgery

- The cost of gastric sleeve surgery in Jordan could be 40-60% lower than that in the US, Canada, European nations, the UK or other developed parts of the world.
- Our network doctors in Jordan are highly-qualified and adept at various types of weight-loss surgeries.
- Jordan is celebrating bicentenary since the rediscovery of Petra which stands formidable in the quiet of mist-sealed places on Earth. Petra, no doubt, competes with Machu Picchu or Angkor Wat for the title of world's most intriguing 'lost city'.
- There is a lot to explore in Jordan, from ruined Roman sites to the brook where Jesus was baptized to the mountain where Moses first set eyes on the 'Promised Land.' Gastric sleeve surgery in Amman, Jordan may well be your calling to Promised Land.
- Jordan is the top medical health care provider in the Arab region and North Africa according to a study commissioned by the World Bank. The same study ranks Jordan fifth world over. Many Jordan Hospitals are JCI accredited ensuring compliance to international standards.

Correlation between IFMEs, FTFs and Diversions

Conclusions

- Pre-flight airport passenger FTF assessment became a common practice by many airlines
- Pax-normalized figures have increased for many airlines
- Certain airlines/regions appear to be affected by medical tourism
- Properly trained medical personnel applying well-structured guidelines can achieve consistent recommendations
- Consistent data capture and follow-up would provide evidence to support medical guidelines
