  4. Colombian Civil Aviation Regulations, RAC 21. § 21.515

Dear Mr. Rankin,

According to your application for the acceptance of **FAA Supplemental Type Certificate No. SR00925DE**, related to the installation of the Garmin transponders plus qualified position sensor:

(a) GTX 3X5 and 3X5R with ADS-B Out & In functionality on Part 29 rotorcraft;

considering that Peregrine has submitted the associated technical documentation, which was reviewed and evaluated under Colombian Civil Aviation Regulations (RAC 21, § 21.515). The Colombian Civil Aviation Authority (UAEAC) accepts the foreign Supplemental Type Certificate No. SR00925DE for major alteration application on Colombian registered aeronautical products, in accordance with airworthiness limitations and conditions stated in the FAA Supplemental Type Certificate. The aeronautical product must be listed in the respective Approved Model List (AML) of this STC. The SR00925DE STC will be entered in the national index of accepted STCs. It is important to mention that a copy of the STC and required documents should accompany each installation (RAC 43, § 43.300 (b)).

In addition, please consider that your company is responsible to keep this STC information (The alterations' published documents) updated to guarantee safe operation and support the continued airworthiness of the altered aircraft registered in Colombia.

Any major change of the STC information must be reported and documented to the Colombian Civil Aviation Authority (UAEAC).

The validity of this letter of acceptance expires when the Supplemental Type Certificate approval ceases to exist. If at any point of time, the UAEAC finds that there is a reasonable doubt to indicate that the safety of the aeronautical product is compromised because of an unsafe condition developed in the aeronautical product, UAEAC may cancel the letter of STC Acceptance.

Kind regards,

**LUIS ALBERTO VALENCIA VALENCIA**  
OPERATIONAL SAFETY SECRETARY  
Colombian Civil Aviation Authority (UAEAC)
